

## Lighting Simplified

i-Lighting offers outdoor LED lighting solutions for decks, stairs, landscapes and hardscapes. The unique LED lighting systems make lighting simple, reliable and worry-free. Everything you need for installation is included. The wiring harness is as simple to connect as plugging A into B. All you need is a 7/16-inch drill bit, a hammer and a No. 1 Phillips head screwdriver to install. The power pack plugs into a 110-volt AC outlet and transforms the current to low-voltage DC. This allows the system to run 50 or more lights off one power pack.

## A Sentinel for Clean Ponds

Sentinel Deluxe Aeration Systems from EasyPro Pond Products are now powered by Stratus ERP series compressors with a two-year warranty. The Sentinel kits offer an energy-efficient way to aerate ponds up to 6 acres through diffused bottom aeration. Sentinel systems come complete with locking cabinet, compressor installed, tubing, valved manifolds and diffusers.

## Permeable Pavers for Stormwater Management

CalStar Products has introduced permeable pavers that help manage stormwater runoff and are suitable for vehicular applications. The pavers contribute to multiple LEED credits, including stormwater design quality management and quantity control.

The ASTM-compliant permeable pavers are nominally 5 by 10 inches by 80 millimeters and are designed to be installed as part of a permeable system incorporating a permeable sub-base. The pavers feature large lugs, which provide 5.9 percent open area to accommodate stormwater runoff and help prevent flooding. The pavers—available in eight solid and three range colors—are ADA-compliant for slip resistance and maximum allowable space between units.

## Growing Goes Vertical

Kane Mfg. Corp. announced its newest architectural product, Eco Screen by Kane, a living wall system that fastens to outdoor structural walls using steel wire panels. It offers a rich, organic aesthetic without compromising the integrity of existing construction. Eco Screen allows plant life to grow freely, without the worry of aggressive vegetation anchoring itself to building materials. Its galvanized and galvanized steel composition provides durability.
